Complete the following assignment in Microsoft Excel:

Meteorologists can use worksheets to summarize weekly weather conditions. For each day of the week, these worksheets might have data on such factors as low temperature, high temperature, median temperature, humidity, and precipitation. Develop a worksheet that can be used to study weekly weather conditions for a two week period. Have at least six factors for each day of the week, and use functions to find weekly averages, highs, and lows where appropriate. Insert the weather data for each week on a separate worksheet. Create a consolidated worksheet based on the two weeks. Include a chart on each of the week’s worksheet that illustrates one weather factor.
