Balancing a budget is a significant challenge for many students attending college. Whether you work part-time or simply draw on a sum of money while going to school, you must equalize income and expenditures to maintain your budget. Use the concept and techniques presented in this project to create and format a worksheet that reflects your monthly budget throughout the school year. Indicate the amount of money you have available each month. Hypothesize percentages for monthly expenditures (tuition, books, entertainment, and etc). On the basis of these assumptions, determine expenditures for each month. Include a row for occasional miscellaneous expenses (such as travel). Ascertain the amount of money remaining at the end of each month; this amount will become part of all of the money available for the subsequent month. Perform at least one what-if-analysis to examine the effect of changing one or more value in the worksheet, and goal-seek to determine how expenditure must be modified to have $500 more available at the end of the school year.
